

Semantic Web Technologies – Problem 4

- b) Asking ELIZA the same question multiple times, reveals that the bot has not the ability to leverage the talk to other subjects. Instead, ELIZA always gives the same answers. Also, a real person would answer the question “Are you human?” with “Yes” and not with evasive answers.
- c) ELIZA is not really learning about you. She “knows” predefined answers to predefined questions. She gives output to a specific input. Which fits the behavioristic learning model. No construction or thinking is happening.
